Re: SBIR Solicitation OSD08-IA6, Assuring Trust between the Edges

Dear Mr. Shaw:

Thank you for briefing your project to our team. The Boeing Company, Space and Intelligence Systems (S&IS), Strategic Technology Office supports your proposal, in response to SBIR solicitation OSD08-IA6, for investigation into technologies and methodologies for building and assessing networks that are reliable, secure and accurate. As systems become more distributed and complex, your technology would be useful to our customers, as both military and commercial-use integrated space networked systems are pervasive in Boeing S&IS programs. In addition, your technology will impact both terrestrial and airborne programs in Boeing's Integrated Defense Systems and we see the potential to integrate your work with our own internal research and development efforts.

To support Global Uni-Docs Corporation's efforts, the Boeing S&IS Strategic Technology Office will provide input during Phase I to help ensure that its development efforts will be well suited to the aforementioned programs.

Sincerely,

Gail Taylor-Smith, PE
Director of Strategic Technology
Space and Intelligence Systems
Boeing Integrated Defense Systems
El Segundo, California
